

How to create a new load in Alvys:

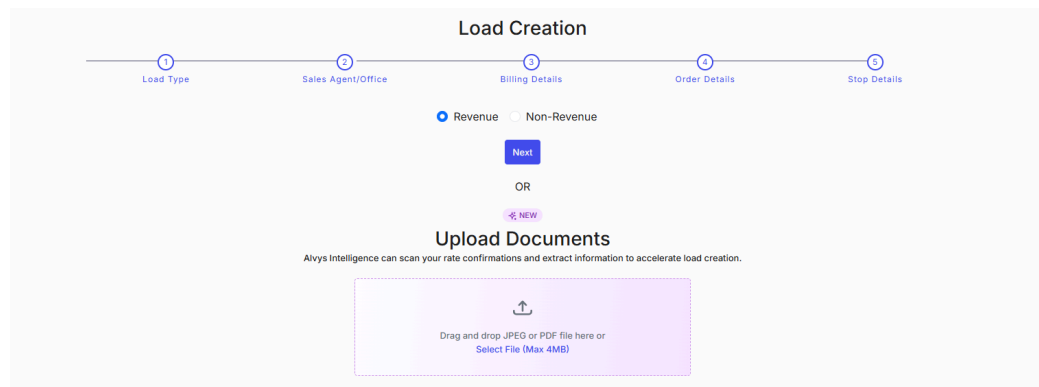

1. Step One:

1.1 On the left-hand side, you will find the navigation (NAV) panel, where you can click on “**+ New Load**”.

Alternatively, you can use the shortcut **Alt + Shift + L** to create a new load.

1.2 After clicking “**New Load**” or using the hotkey, you will see the following screen:

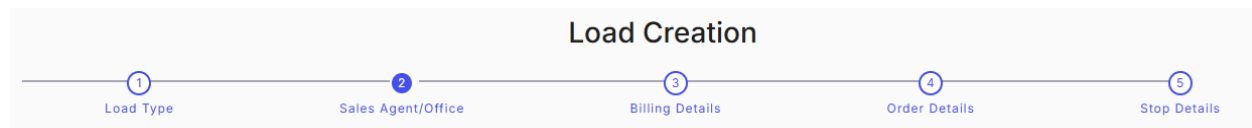

1.3 Before uploading the Rate Confirmation or pressing the **“Next”** button, you need to choose the **load type** you will be working with.

1.4 A Revenue Shipment refers to a standard load that is picked up at Point A and delivered to Point B, with an agreed-upon rate for hauling the shipment.

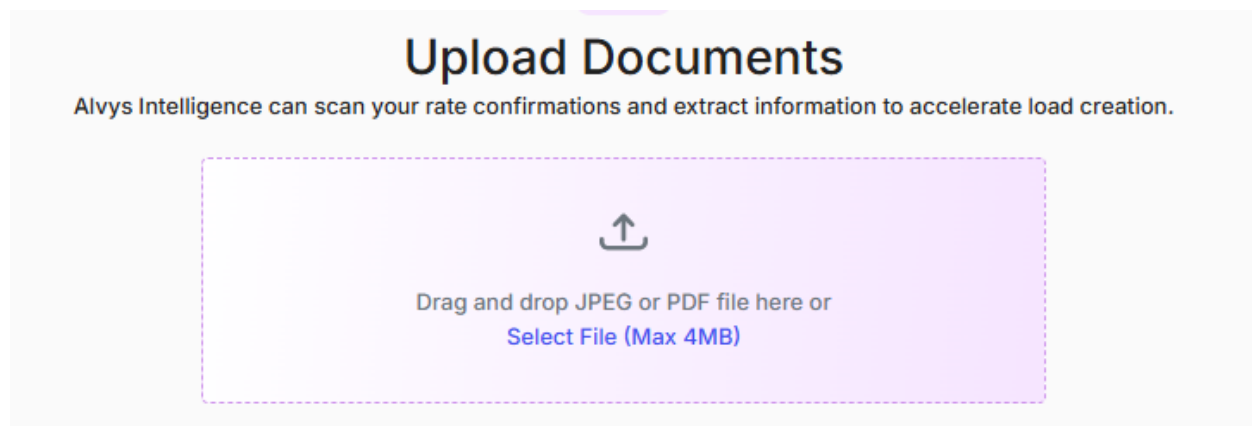

1.5 A Non-Revenue Shipment means the load will not be paid by the broker. This could be due to various reasons such as a repower shipment, an empty trailer move, or another situation where no profit is made. However, it’s still important to log this activity, as a driver completed the job and must be compensated for it.

1.6 You will also see a **5-step progress bar** that shows the current step you're on. This helps you easily understand where you are in the process and what needs to be done next.

2. Step two:

2.1 You can add a new load either by manually entering the information from the Rate Confirmation or by uploading the document. To upload, drag and drop the file or select it from your computer in the **“Upload Documents”** section.

2.2 Regardless of whether you enter the information manually or upload a file, you must verify that all submitted details are accurate and match the original Rate Confirmation.

2.3 We selected the **“Revenue”** load type and proceeded to the next step, which involves verifying the **initial agent (dispatcher)** assigned to this particular shipment.

2.4 At this step, simply click **“Next”** to continue. There is nothing to modify here, as all the information is set to default.

2.5 Completing the customer (**broker**) information is straightforward. If we've worked with the broker before, we can search for them in the system. If not, we can easily add a new broker by clicking on **“New”**.

2.7 This step is simple—just follow the guided prompts in the system. Select the **customer or broker**, enter their **full company name**, and assign the **office** (by default, this should be “**UE Line INC**”). You must also enter the **MC number** of the customer or broker.

Invoicing information can usually be found on the Rate Confirmation (RC), or you can contact the **Accounting Team** for quicker assistance. In most cases, broker information can also be found on **RTS**, which allows you to submit it quickly.

2.8 You can add additional broker or customer contact information in the “**Contacts**” section. You can also upload setup packets or broker-carrier agreements in the “**Documents**” section.

2.9 Once the broker or customer information has been submitted, enter the agreed rate for the load in the **“Billing Rate”** section.

The screenshot shows a web form with a top navigation bar containing links: Load Type, Broker Agency/Carrier, Billing Section (active), Order Section, and Ship Section. The main form area is divided into two columns. The left column has a 'Customer' section with a text input containing 'TOTAL QUALITY LOGISTICS LLC' and an 'Edit' button, and an 'Invoicing Name' section with a text input containing 'TOTAL QUALITY LOGISTICS LLC'. The right column has a 'Billing Rate' section with a text input containing '\$ 2000' and a 'Flat Rate' dropdown, and a 'Contact Person' section with a dropdown menu and a '+' button. At the bottom center are 'Previous' and 'Next' buttons.

Note: The **Contact Person** section is optional and does not need to be filled out.

3. Step three:

3.1 After assigning the broker or customer to the load, submit the required information, including:

- **Order Number**
- **PO Numbers**
- **References** (if applicable)
- **Equipment Type**
- **Weight and Commodity Details**

The screenshot shows a web form with a top navigation bar containing links: Load Type, Broker Agency/Carrier, Billing Section, Order Section (active), and Ship Section. The main form area is divided into two columns. The left column has an 'Order Number' section with a text input containing 'Please enter the order number.' and a red error message, a 'PO Number' section with a text input, and a 'Reference Name' section with a text input. The right column has an 'Invoice As' section with a dropdown menu containing 'UE LINE INC (MC #930850)', a 'Fleet' section with a dropdown menu, an 'Equipment Type' section with a dropdown menu containing '- Select Type -', and an 'Equipment Length' section with a dropdown menu containing '- Select Length -'. Below these are 'Weight' and 'Temperature' sections. The 'Weight' section has a text input containing 'This field will be filled automatically.' and a 'lbs' unit dropdown. The 'Temperature' section has a text input containing 'Temperature' and a 'Temperature Max' section with a text input. To the right of these is a 'Continuous' toggle switch. At the bottom are 'Previous' and 'Next' buttons.

3.5 The **Pick-Up/Shipper** information can be completed by entering the following details:

- **Shipper Name**
- **Address**
- **City, State, ZIP Code**
- **Location Working Hours** (can be found on the Rate Confirmation or verified via Google)
- **Commodity Details** (if applicable)

You will also need to specify:

- **Shipping Type:**
 - **Live Load** – the driver is loaded at the shipper
 - **Hook** – the driver arrives bobtail and hooks a preloaded trailer
 - **Drop & Hook** – the driver drops an empty trailer and picks up a loaded one
- **Pick-Up Type:**
 - **FCFS** (First Come, First Serve)
 - **APPT** (Appointment Required)
- **Special Instructions:**
 - Add any specific notes mentioned in the Rate Confirmation

3.6 Below is an example of a completed **Pick-Up/Shipper** information page:

Note: If the shipper location is not found in the system, you can manually add it—just like you did with the broker or customer.

Stop Instructions

3.7 By clicking **“Add Stop,”** you can enter the **Delivery/Receiver** location. This step is completed the same way as the Pick-Up/Shipper information.

3.8 Once the Pick-Up/Shipper and Delivery/Receiver information has been completed, Alvys will allow you to proceed by clicking the **“Review”** button.

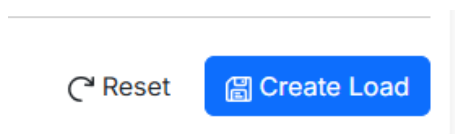

Note: The **“Review”** button will not appear until both the **Pick-Up** and **Delivery** information are fully completed.

3.9 By clicking **“Review,”** you will see a summary of the load, including Pick-Up and Delivery details, Broker information, Load Number, and more.

At this stage:

- **Upload the Rate Confirmation**
- **Double-check** all the entered information for accuracy
- Click **“Create Load”** to finalize the process

4. Step four: Load Management:

4.1 Load Status (Open) Means that this load isn't assigned to the driver

4.2 You can assign the driver by following a few simple steps. Click **"Manage Assets"** under the **Carrier Details** section.

Assign And Dispatch

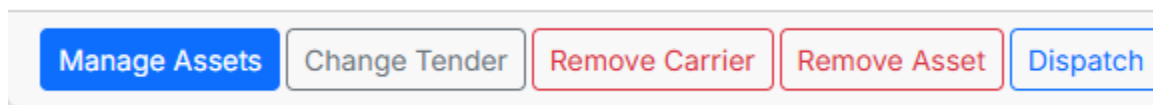

Assign

Note: Driver information, along with **truck** and **trailer numbers**, must be entered manually. While all drivers, trucks, and trailers are already available in the system, trucks are currently **not automatically assigned** to drivers.

4.3 A driver can either be **assigned and dispatched**, or simply **assigned**:

- **Assigned and Dispatched** – The driver will immediately see the load in their Alvys mobile app.
- **Assigned Only** – The load will be marked as **covered** in the system, but it will **not appear** in the driver's app until they are officially dispatched.

4.4 If you assigned the driver without selecting “**Assign and Dispatch**,” you can easily dispatch them later by clicking the “**Dispatch**” button located near the **Manage Assets** section.

Final Note:

There are additional actions that may be required in the system, and instructions for those will be provided by **management** as needed. Your **first load** will be completed with the assistance of a **manager or a trusted company representative** to help you understand the process.

The system is user-friendly and, once you're familiar with it, creating and managing loads will be quick and efficient.

Functions such as adding **detention, layovers**, changing the load status to **TONU**, or **canceling a load** will be explained in detail when those situations occur.

This SOP is designed to guide you through the **core process**:

- Creating a load
- Assigning and dispatching a driver
- Using the built-in tracking system to reduce time spent on emails and calls.
